

Origami Standing Dog Directions

provided by Briarcliff Manor Public Library

Step one:

Fold in half along dotted line shown to make it a rectangle.

Now it looks like this:

Now open it back up and it looks like this:

Step two:

Turn the paper so it looks like this:

Fold it in half along the dotted line shown to make a rectangle:

Now open it back up and it looks like this:

Step three:

Fold the corners into the center along the dotted lines shown.

[The outer edges of the paper should line up with the creases. You are dividing each of those 4 “squares” (shown by the creases) in half diagonally.]

It should look like this:

Step four:

Position the paper like this:

Unfold the left flap so it looks like this:

Fold along the dotted line so that the outer point is just at that fold line:

It should like like this:

Step five:

Now there are only 3 of our “triangles” left. Two on top/bottom and one on the right. The one on the right (which is the one opposite the one we just did a fold with) is the one we are going to fold next.

We are going to fold the point back away from the center along the dotted line shown.

It should look like this:

Now fold the left side in again along the fold line that was there from before (shown above in grey). It should now look like this:

Step six:

Now fold the the whole thing in half along the dotted line shown by bringing the top edge down to line up with the bottom edge.

It should like like this:

Step seven:

Now lie it down on the table so it looks like the picture above and let go. The top will pop up from the fold a bit, letting you see how it is folded inside. Untuck/unfold that top big triangle...pull it all the way out and then just push that half fold you did in Step six down again. It will then look like this:

Step eight:

Now take hold of that edge marked green and fold it up along the dotted line shown.

It should look like this:

Step nine:

Now you flip it over left to right. The sticking out triangle should now be on the other side. Do you see the rectangle shape? Lift that rectangle slightly to reveal the big triangle folded underneath. Untuck/unfold that triangle so it is all the way out and push the rectangle fold back down so the triangle is now sticking out and down like this:

Step ten:

Now take hold of that edge marked green and fold it up along the dotted line shown. Those green edges will line up with the edge shown in purple.

It should now look like this:

Step eleven:

Do you see the diagonal fold line above (in grey)? Do you see how that fold line is the diagonal of a right triangle? That same fold line is on both sides. Refold those right triangles down on that fold line on both sides. It should look like this:

Step twelve:

In the fold that the arrow is pointing to below, if you open that a bit, you will see paper in there that is tucked in. Carefully, pull that piece out, untucking it. As you pull it out, you will see there is a crease in it. Use that crease as your guide while you continue to pull that paper all the way out you will then push down on that crease so that it is now folded in the opposite way along the same crease.

It should now look like this:

Step thirteen:

Finish off your dog by giving it an eye and nose on both sides with a marker or pen. When you set it down it should stand up on its own. Congratulations! You are done!
